STATE ESTIMATES OF FARM INCOME, 1959-71

The detailed State estimates in this report backup the U.S. and State data published in the July 1972 Farm Income Situation, FIS-220. State estimates for 1969-70, published in the August 1971 Supplement, and preliminary 1971 indications, published in FIS-219, February 1972, have been revised in line with more up-to-date information on production, marketings, prices, and loan activity. The revisions may present a different picture among and between States for the 1969-71 period than was presented earlier.

All estimates in this report, as in all official Department farm income data, are on a calendar-year basis. They tie in with the national income and product accounts and State and regional income estimates maintained by the Department of Commerce. The historical data start with 1949 for the 48 conterminous States; Alaska and Hawaii start in 1960. However, this report starts with 1959 because of space limitations.

Detailed information on marketing receipts, by commodity groups and individual commodities, and direct government payments by programs are shown for 1969-71. Production expenses, by major accounts, are presented for all States from 1959 through 1971. Because of the necessity of tying farm accounts into published national income accounts, some items in

production expenses do not fully reflect information available from the Census of Agriculture or other recent benchmarks.

Gross and net farm income averages per farm are shown in tables 3-5. In some cases, the revisions may reflect slight changes in farm numbers by States as reported by the Statistical Reporting Service. For 1971 only, tables 1 and 2 afford a quick look at the important farm products by States and for each State its relative importance in receipts from marketings of livestock and crops.

The estimates in this report are made in the Economic Research Service with the exception of direct government payments data which are based on fiscal reports of the Agricultural Stabilization and Conservation Service (ASCS). Net loans made under the price support program by the Commodity Credit Corporation (CCC) are included in the cash receipts from farm marketings totals.

There are several instances in this report where adjustments have been made since the publication of the July 1972 Farm Income Situation. Any adjustments are detailed in footnotes to table 10, but the State and commodity group totals do not reflect these changes since they are tied to previously published national income and product totals.

Data from 1949-58, by States, can be found in
FIS-216 Supplement, August 1970, ERS, USDA
